How big is the automotive and supplier industry, and how many participants are there worldwide?

At first glance, these questions may seem trivial, but with a closer look you may notice they are not so easy to answer. Dun & Bradstreet has analyzed its global database of more than 500 million company profiles to find the most accurate answer.

The starting point for the analysis is the industry classification of the companies. Taken all together by company classification for manufacturers of motor vehicles and their suppliers, the result is 28,654 companies. But that doesn't cover the full spectrum of market participants.

Analysis of the international automotive and supplier industry

There are 7,657 manufacturers of motor vehicles worldwide. However, it must be taken into account, that:

- a) The label "manufacturers of motor vehicles" is not restricted to manufacturers of passenger cars; it also includes thousands of manufacturers of trucks, a wide variety of commercial vehicles and even agricultural machinery.
- b) To an increasing extent manufacturers of motor vehicles also act as suppliers. After decades of streamlining production and concentration on the core product, the transition to electric mobility has led to rediversification. Manufacturers are producing critical components such as batteries themselves.

With regard to the supplier industry, the situation is complex in different ways:

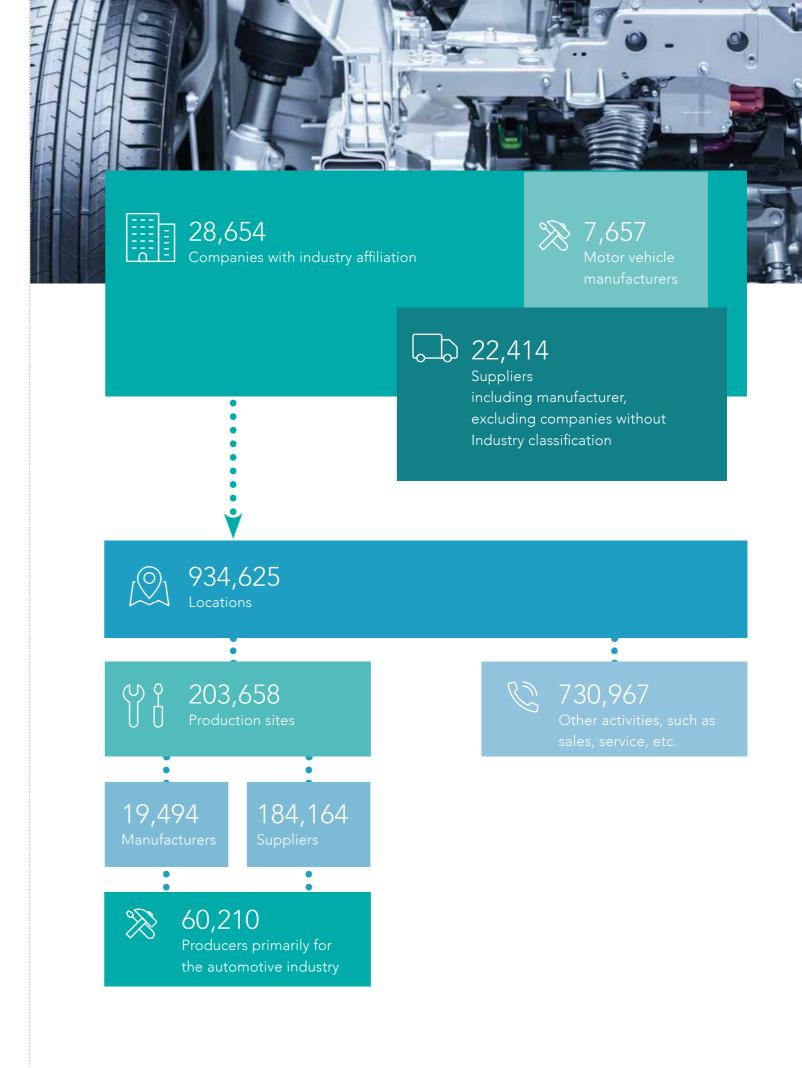

- a) The 22,414 supplier companies (including. manufacturers who are also active suppliers) does not equate to the total number of suppliers there are many more. A large number of companies that supply the automotive industry with standard parts, connecting and fastening technology, but also electronic parts or components are classified as metalworking companies or semiconductor manufacturers.
- b) The 22,414 supplier companies themselves cannot be seen as belonging to Tier Level 1 as a whole. As the example of manufacturers already shows, they can be assigned to different tier levels and even simultaneously.

With these findings as a background, what can be said about the global presence and business activities of the identified 28,654 companies? For now, these are only the locations of the group companies that are represented via subsidiaries and branches. And these at a total of 934,625 locations. This huge number includes all activities of the companies - finance, marketing, fleet, sales, services, and production.

In fact, this figure conceals 203,658 production sites (i.e. manufacturing subsidiaries, branches, plants, etc.). Of these, 19,494 locations relate to the manufacturers of motor vehicles, and 184,164 to the supplier industry.

However, not all locations in the industry manufacture exclusively for the industry - a large number of the companies are more or less diversified and produce a number of different products, which also address different needs and markets. Ultimately, there are 60,210 locations, where production is primarily to support the automotive industry.

White Paper International automotive and supplier industry | 5

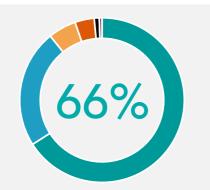

What are the most significant markets for the automotive and supplier industry?

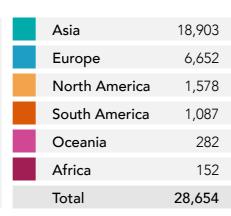

GLOBAL DISTRIBUTION OF COMPANIES

More than 50% of the companies are based in Asia (18,903), followed by a high percentage in Europe (6,652) and then North America (1,578).

TOP 10

The TOP TEN is now dominated by China (8,923), followed by India (4,289) and Japan (4,010). In 4th place - rather surprisingly – Italy (1,234) - is on a par with the USA (1,219) and then Germany (936).

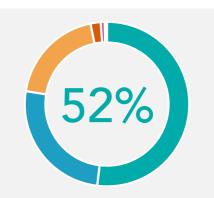

1	China	8,923
2	India	4,289
3	Japan	4,010
4	Italy	1,234
5	USA	1,219
6	Germany	936
7	Brazil	764
8	Spain	633
9	France	586
10	Korea	559

GLOBAL DISTRIBUTION OF PRODUCTION SITES

When looking at the locations (and here it is first of all the production locations of the manufacturers and suppliers), there is no change in the continental ranking. More than half are located in Asia (105,706), one quarter in Europe (52,159), and 20% in North America (39,224).

TOP 10

The picture changes for the TOP TEN in the country rankings - the USA (33,689) is at the top of the list in terms of the number of production sites, followed by India (33,555), China (32,066) and Japan (30,693) at about the same level. Germany (11,883) follows in 5th place, then Italy (6,716) in 6th place.

USA	33,689
India	33,555
China	32,066
Japan	30,693
Germany	11,883
Italy	6,716
England	5,270
France	5,203
Spain	3,736
Poland	1,890
	India China Japan Germany Italy England France Spain

How do such shifts come about?

The reason for these shifts lies in the different degree of concentration of production in the corporations. While American companies have an average of 25 production sites and German companies have 19, Japanese companies have an average of only 10 and the Chinese, Indian and Italian companies between three and six locations.

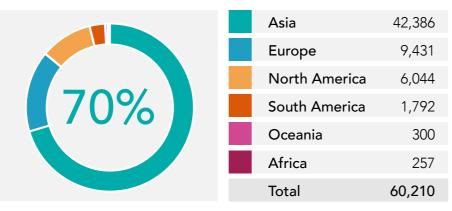

The latter markets, especially China, are clearly characterized by smaller companies with a smaller number of production sites.

GLOBAL DISTRIBUTION OF SUPPLIER SITES

The picture changes once again when we look at those 60,210 locations that are primarily suppliers to the automotive industry. The ranking of the continents does not change - Asia dominates (42,386) but with two-thirds of all locations. Europe (9,431) still accounts for one in six, and North America accounts for only one in ten.

TOP 10

In the country rankings, the order changes again - now the Asian companies from India (14,442), China (13,933) and Japan (11,429), are well ahead of the USA (4,620) and Germany (2,175). This also allows conclusions to be drawn about a possible higher degree of diversification of the American and German applies in part to Japanese corporations.

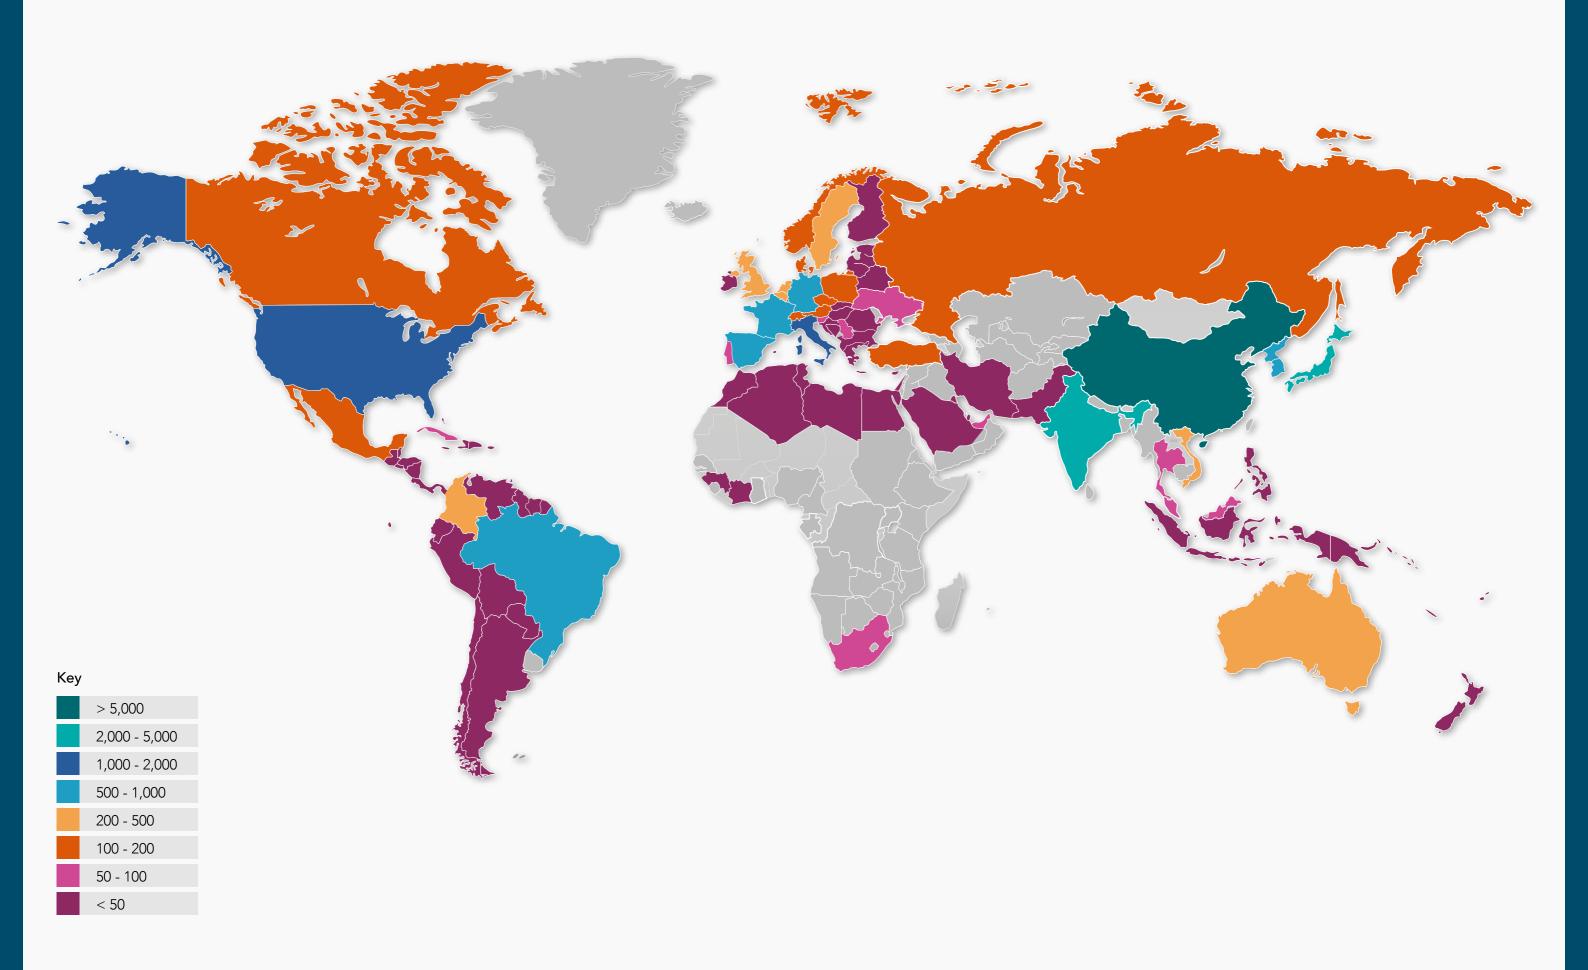

1	India	14,442
2	China	13,933
3	Japan	11,429
4	USA	4,620
5	Germany	2,175
6	Italy	1,646
7	Spain	1,159
8	England	888
9	France	559
10	Poland	363

Does this analysis mean that the entire automotive and supplier industry is covered? No, not by a long shot. We still need to take a look at the supply chains. As already stated, the companies analyzed are themselves companies already represented as suppliers in various or are based in various tier levels - but detailed information on this can't be found in the sector classification, which was not the focus of this analysis.
